

EXPRESS / ADVANCED SOFTWARE

Supports FA MSM App

Cansec's First Access® software provides a powerful yet easy to use platform to manage the whole family of MAP access control panels. It is available in two versions: The free Express version for basic access control functions and Advanced for more complex applications. Both support up to 1,024 readers and 100,000 cards. **NEW** - First Access Advanced software now support the First Access Admin app which allows you to control and manage your system from anywhere.

To facilitate deployment, First Access software automatically scans the local network and finds all connected MAP controllers. No need to assign each panel a static IP address. Using the First Access Client software, operators can quickly and easily void and validate credentials, edit Unlock Schedules, Holiday Schedules, Access Profiles, etc.

FEATURES & COMPARISON

	EXPRESS SOFTWARE	ADVANCED SOFTWARE
Cardholder/user capacity	100,000	100,000
Reader capacity	Up to 1024	Up to 1024
First Access clients	5	10
